**KEY WORDS:** packing, packing waste, eco-friendly packing, consumers, biodegradable materials

The waste wrapping materials are representing today the main thread for the consumers all over the world. Although eco-friendly packing materials does not represent a priority in this moment for the consumers, the food industries cannot ignore this aspect.

The consumers are preferring the wrapping made by paper or glass being recyclable, in stead of wrapping made by plastic or polyester.

The eco-friendly materials may be used into the future in stead of plastic wrapping, the canned food being sold with small weight.
